

Working Platforms for Plant

Although serious incidents involving working platforms are relatively rare, fatalities have occurred.

CMT (Testing) Ltd offer *in situ* plate load testing to indicate the adequacy of such platforms as detailed in the BRE publication 'Working platforms for tracked plant.'

A fully independent site & laboratory testing organisation, **CMT** have supplied technical expertise and service to the construction, civil engineering & associated industries for well over 30 years with added value advice and guidance forming part of our overall customer support.

If you require information on any aspect of our current operational scope, or require a quotation for plate load testing please do not hesitate to contact me.
